

SolarVenti® Australia

The SolarVenti Professional Solar Air Collector is a roof-mounted modular collector which pre-heats large quantities of fresh air in a cost-effective way.

It significantly reduces the running costs and energy use for heating, night purging and drying of larger commercial and professional buildings. Excellent in cold climates, mass ventilation, agricultural or industrial processes.

The SV Pro is component based, carbon neutral with its own self-cleaning filtration system. It can be integrated with existing HVAC&R AHU's or designed specifically to optimize the HVAC requirements of a new build. Fully certified worldwide.

Benefits

- Active solar heating and drying
- Full filtration for night purging – free cooling
- Improved health and efficiency, OHS
- Low installation costs
- Short payback time
- No costs for dehumidification
