

SControl

SControl is an advanced system management suitable for temperature, moisture and time management.

When connected to the power grid, it is able to provide a regular humidified ventilation even when the sun is not shining.

The controller requires at least connection to an air collector and temperature sensor in the air collector.

The system is available in the following variants:

SControl set 1 – Control, solar sensor PT1000

SControl set 2 – Control, solar sensor PT1000, 12V power supply

SControl set 2CC – for cooling

SControl set 3 (for cellular systems) – Control, solar sensor PT1000, 12V power supply, combi cooler

SControl set 4 – Control, solar sensor PT1000, 12V power supply, 2 pcs. Combination sensor

SControl set 5 – Control, solar sensor PT1000, 12V power supply, 2 pcs. Combi fan, room sensor (temp.)
